## **Hunger & Fullness Scale**

Our mind and body function best when we stay within the 3 to 7 range. Respond to your hunger and fullness cues before reaching extreme hunger or extreme fullness. When we wait too long to listen to our body's signals (1 and 2 on the scale), this can leave us feeling out of control and more likely to eat past the point of fullness (8 to 10 on the scale).

0	Painfully hungry. This is primal hunger, which is very intense and urgent.
1	Ravenous and irritable. Anxious to eat.
2	Very hungry. Looking forward to a hearty meal or snack.
3	Hungry and ready to eat, but without urgency. It's a polite hunger.
4	Subtly hungry, slightly empty.
5	Neutral. Neither hungry nor full.
6	Beginning to feel emerging fullness.
7	Comfortable fullness. You feel satisfied and content.
8	A little too full. This doesn't feel pleasant, but not yet an unpleasant experience.
9	Very full, too full. You feel uncomfortable; need to unbutton pants or remove belt.
10	Painfully full, stuffed. You may feel nauseous.
